DESCRIPTION

The 7488 is a TTL 256-Bit Read Only Memory organized as 32 word with 8 bits per word. The words are selected by five binary address lines with full word decoding incorporated on the chip. A Chip Select input is provided for additional decoding flexibility, which will cause all eight outputs to go to the high state when the Chip Select input is taken high.

This device is fully TTL or DTL compatible. The outputs are uncommitted collectors, which allows wired-OR operation with the outputs of other TTL or DTL devices. These outputs are capable of sinking twelve standard DCL loads. Propagation delay time is 50ns maximum. Power dissipation is 310 milliwatts with 400 milliwatts maximum.

Customer may specify patterns for the 256-Bit Read Only Memory by completing the truth table/order blank.
